

# Serodifferent Couples

## What is a Serodifferent Couple?

A couple is serodifferent if one partner has HIV while the other does not.

An HIV serodifferent couple is also called a mixed-status couple.

# Ways to Prevent HIV Transmission Within a Serodifferent Couple

Take antiretroviral therapy (ART) as directed

Keep all appointments with your health care providers

Take pre-exposure prophylaxis (PrEP) for HIV prevention

Get tested for HIV often

Use condoms and other barrier methods during sex with each other and other people
